COMPLEXOMETRIC DETERMINATION OF ELEMENTARY SULPHUR AND ELEMENTARY SELENIUM.

Chemical analysis.

A complexometric method was developed for indirect determination of elementary sulphur and elementary selenium. The principle of the method is as follows: Elementary sulphur or selenium is allowed to react with a known excess of potassium cyanide to convert the elements into thiocyanate and selenocyanate. Then on adding nickel solution to the system, excess cyanide ions are determined in the usual way by complexometry.
